DevOps Report Manager

Instructions for installing the program on Linux

To run the installation script, you need to allow its execution, for this you need to:
1) Run the "Terminal" program

2) In the terminal, go to the directory where the downloaded archive with the program is located by running the command
cd $HOME/Downloads/

3) Unzip the archive with the program to the directory you need using the command
tar xvf DevOps_Report_Manager_version_1.0.0_for_Linux.tar -C /$HOME/

4) In the terminal, go to the directory where the script is located by executing the command
cd $HOME/DevOps_Report_Manager_version_1.0.0_for_Linux/

5) In the script directory, execute the following command
chmod ugo+x Install.sh

6) Run the program installation script by executing the command
./Install.sh

7) Close "Terminal" program

8) Download and install Java JDK 8 https://www.java.com/en/download/

9) Download and install Java JDK 11 https://docs.aws.amazon.com/corretto/latest/corretto-11-ug/downloads-list.html

10) If you need to select the default JDK, use the command   update-alternatives --config java
